Presentation Overview

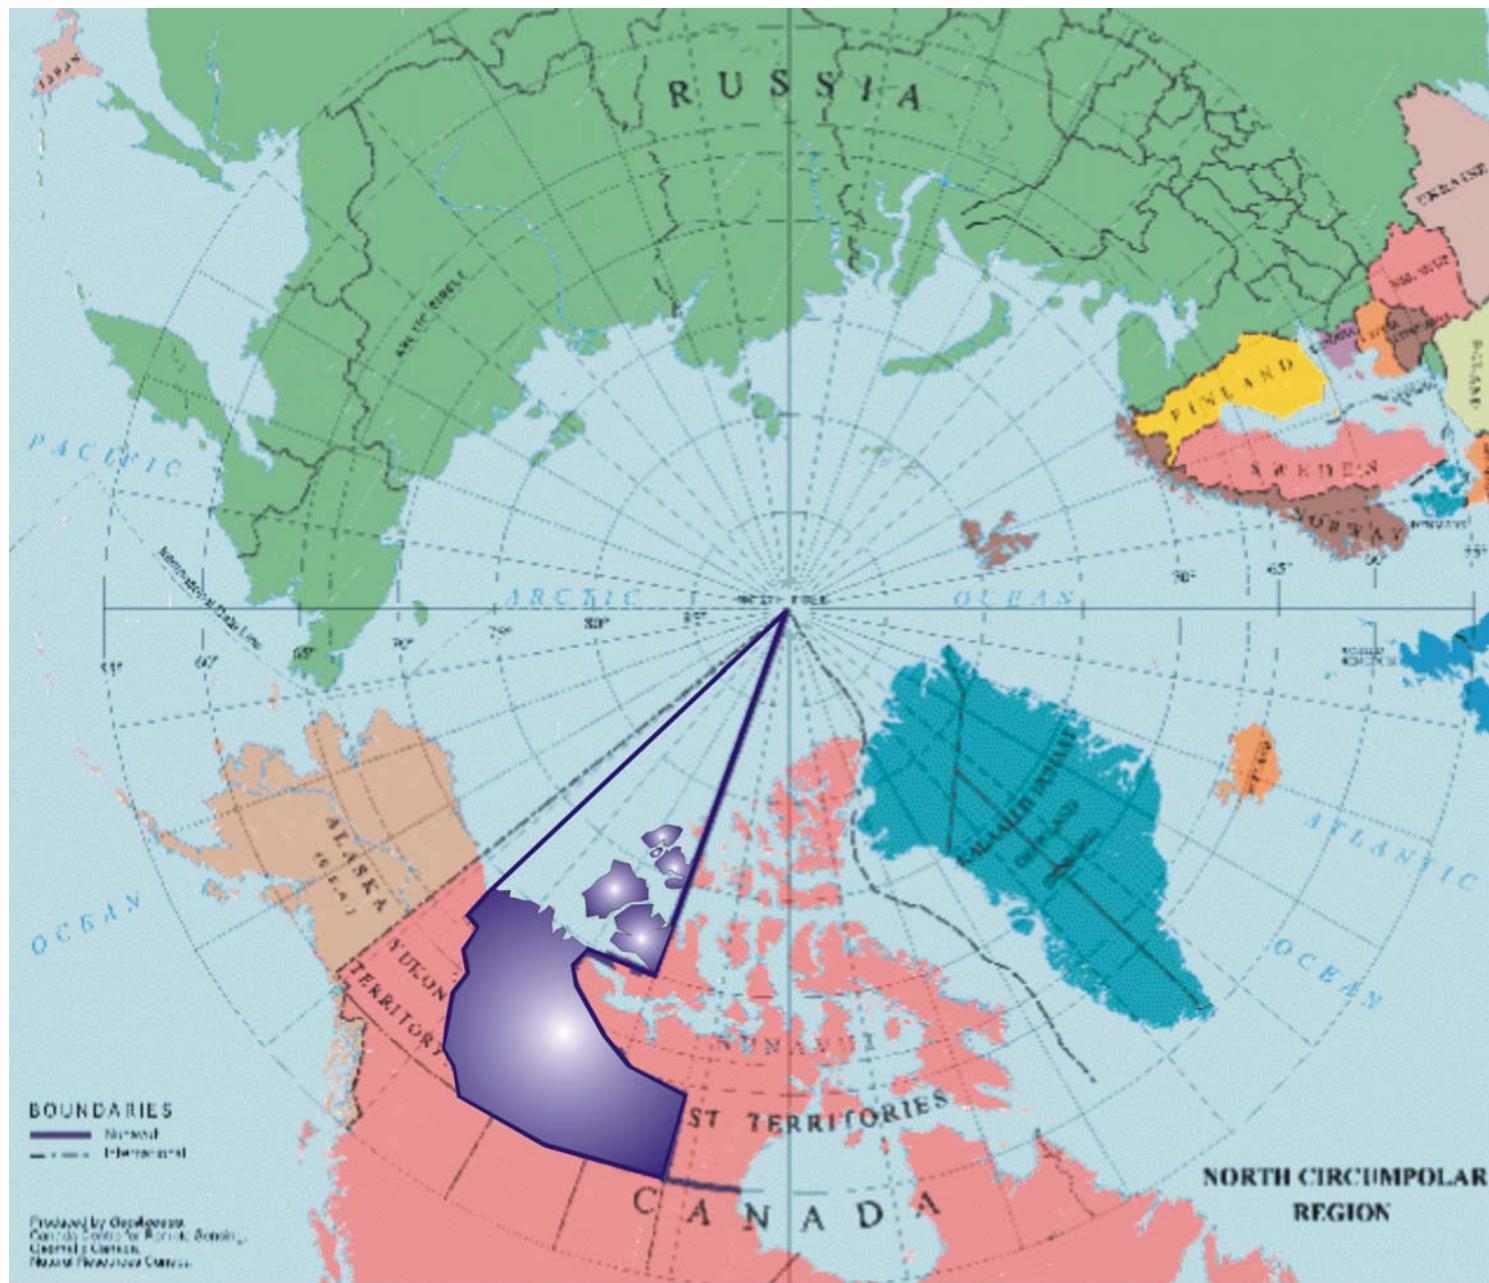

Introduction

- Northern Canada and the Northwest Territories
- Impacts of climate change on the Northern roads
- Video clip
- Permafrost

Case Studies

- Dempster and Yellowknife Highways
- Tibbett to Contwoyto Winter Road
- Mackenzie Valley Winter Road
- Mackenzie River Crossing near Fort Providence

The Northwest Territories

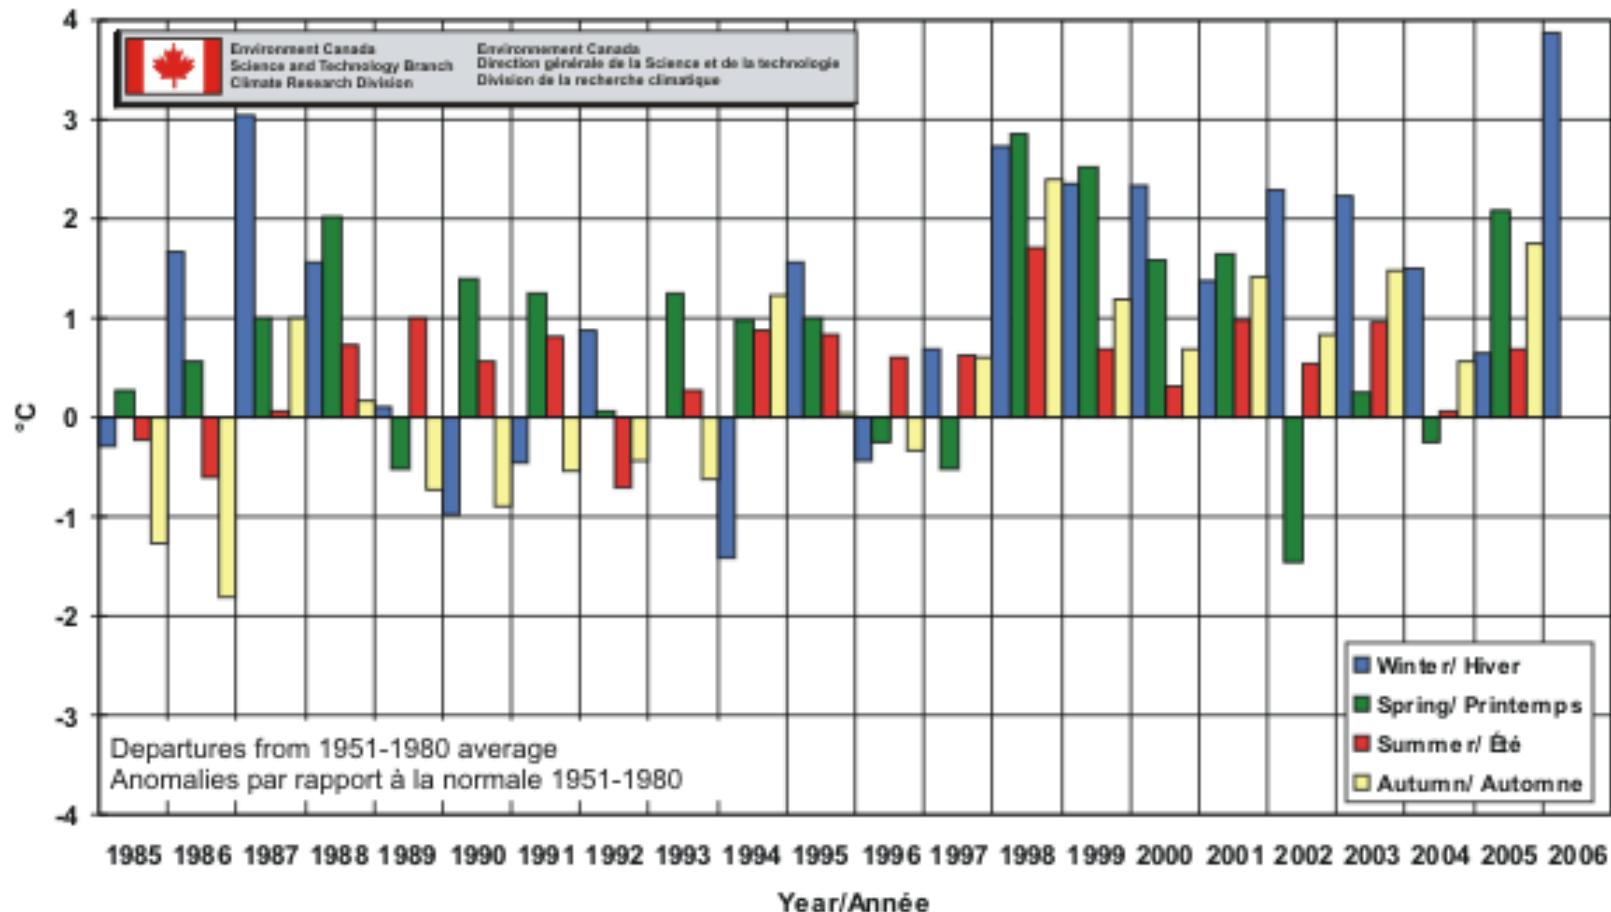

Romantic View of the North

The Reality

Consecutive seasons, national temperature departures, 1985-2006
Anomalies de la température nationale (saisons consécutives), 1985-2006

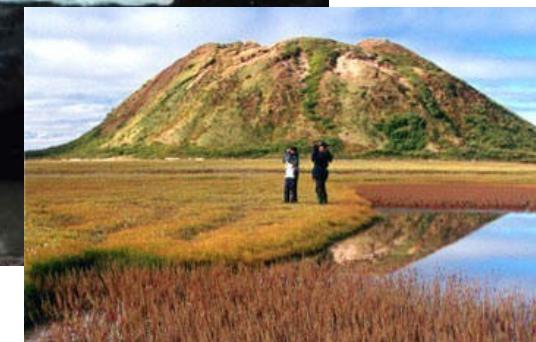

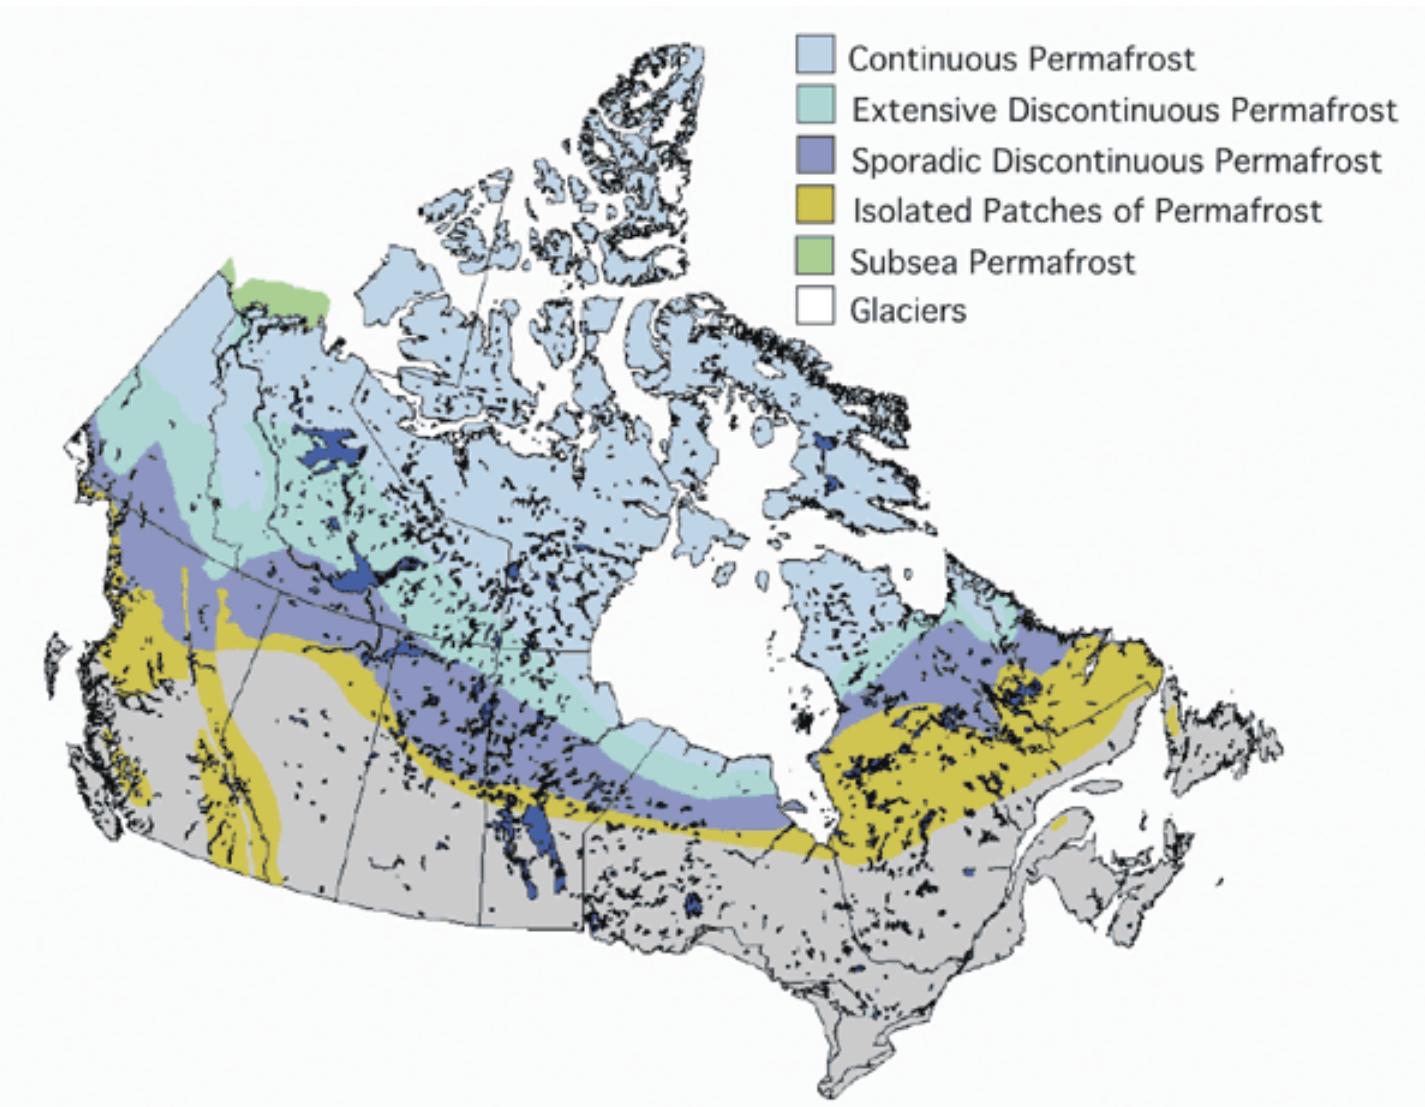

What is Predicted?

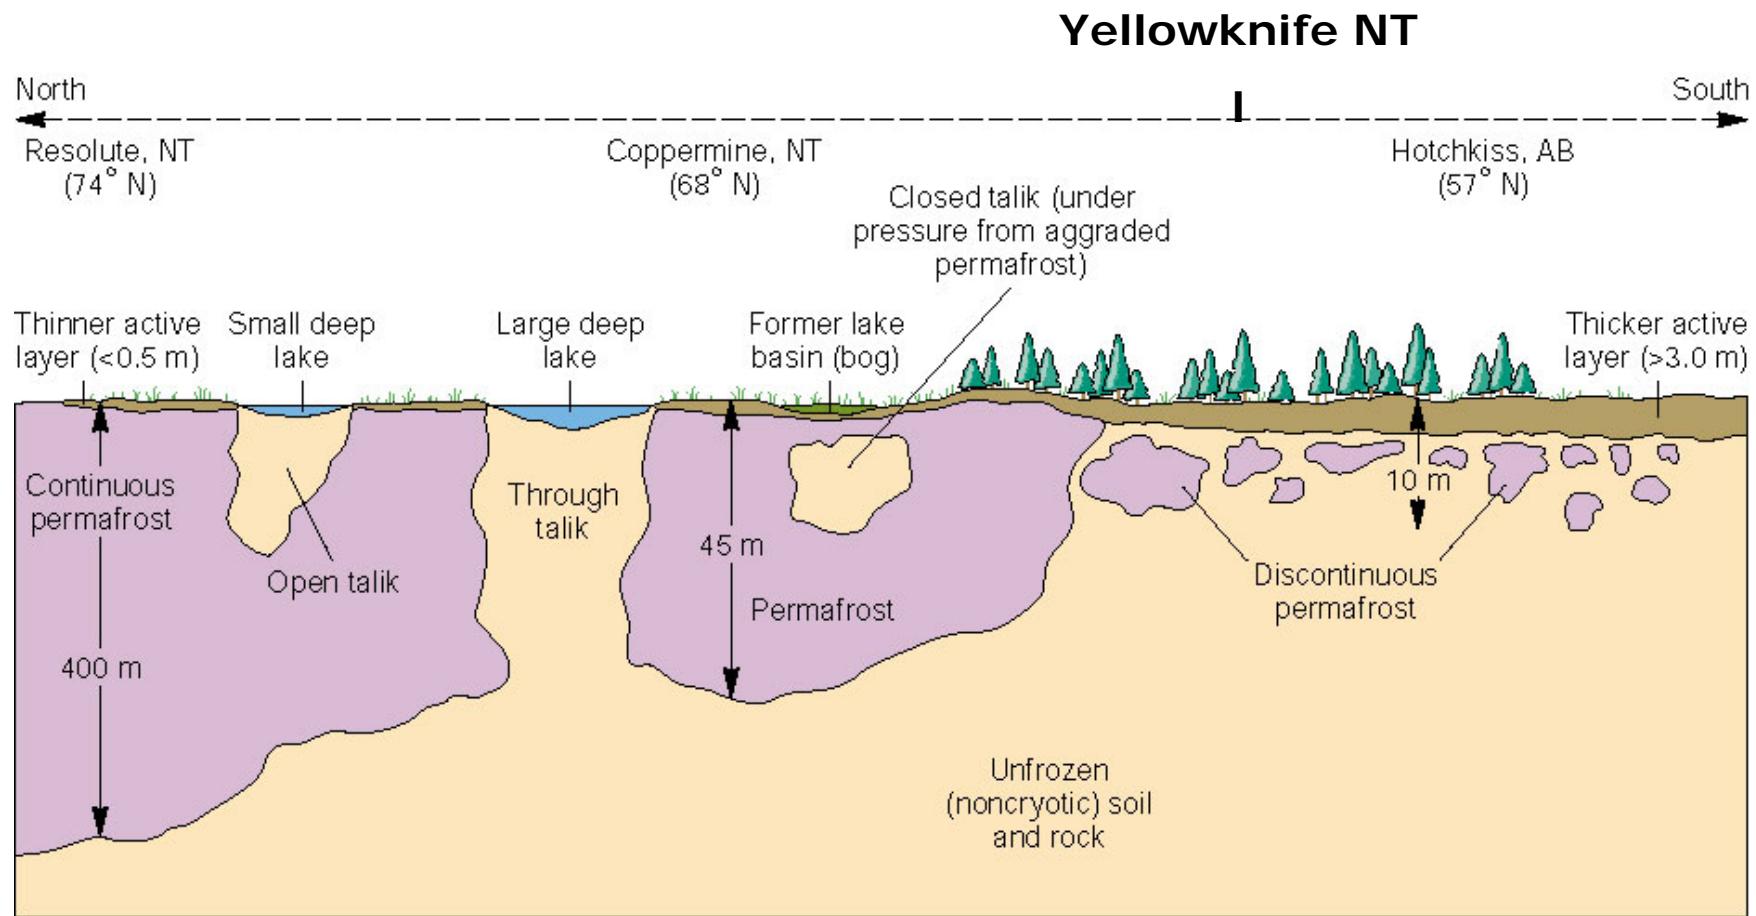

What is permafrost?

Any soil that remains frozen for a minimum period of two years is considered permafrost.

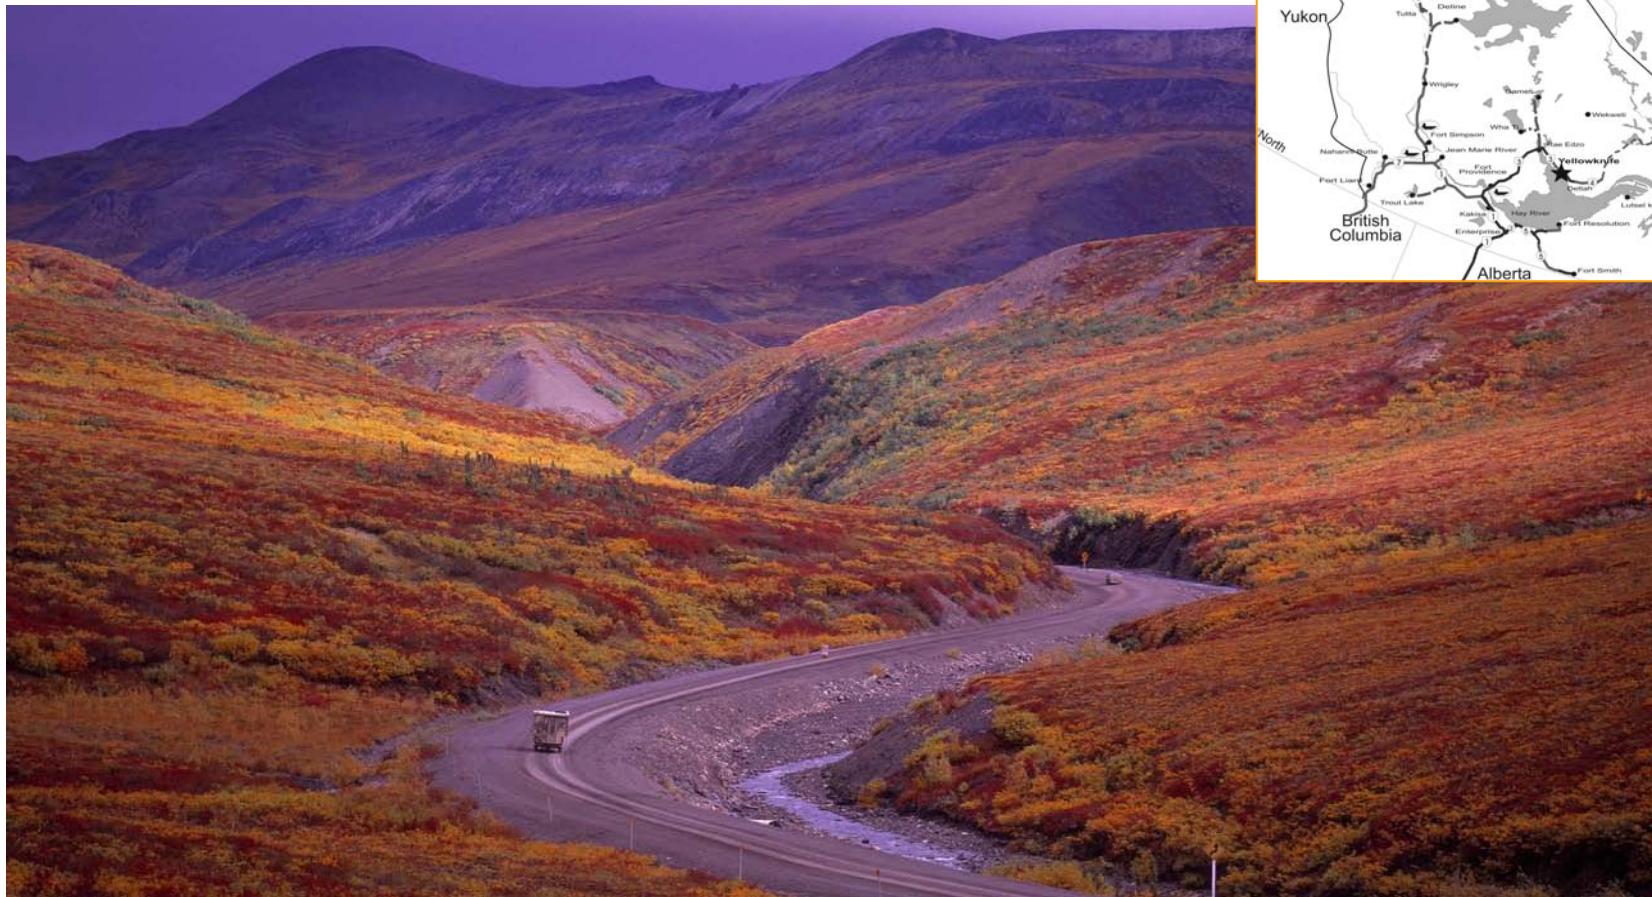

Permafrost

Permafrost Degradation

Dempster Highway

Dempster Highway

Construction of road embankment over permafrost terrain impacts thaw-sensitive foundation soils

Roadbed failure due to subgrade warming may occur more frequently in periods of climate warming

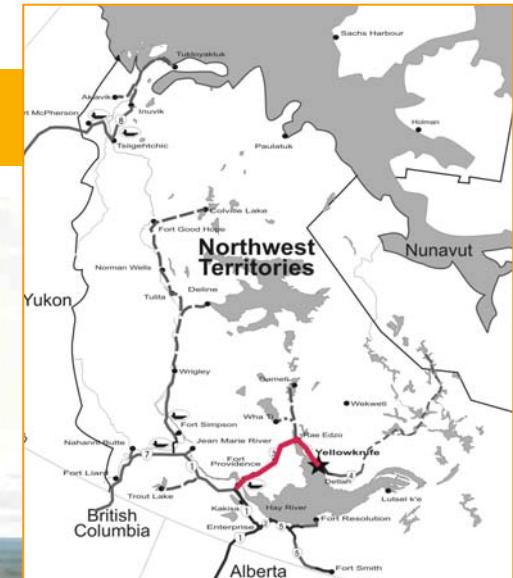

Dempster Highway

Photo by Pierre Castonguay

Yellowknife Highway Upgrade

- 100 km upgrade south of Yellowknife
- Near the southern fringe of the permafrost zone
- Crossings of poorly drained lowlands & permafrost soils
- Local warming trends – risk mitigation design approach

Yellowknife Highway Upgrade

Climate Change Adaptation Strategies – Roads on Permafrost

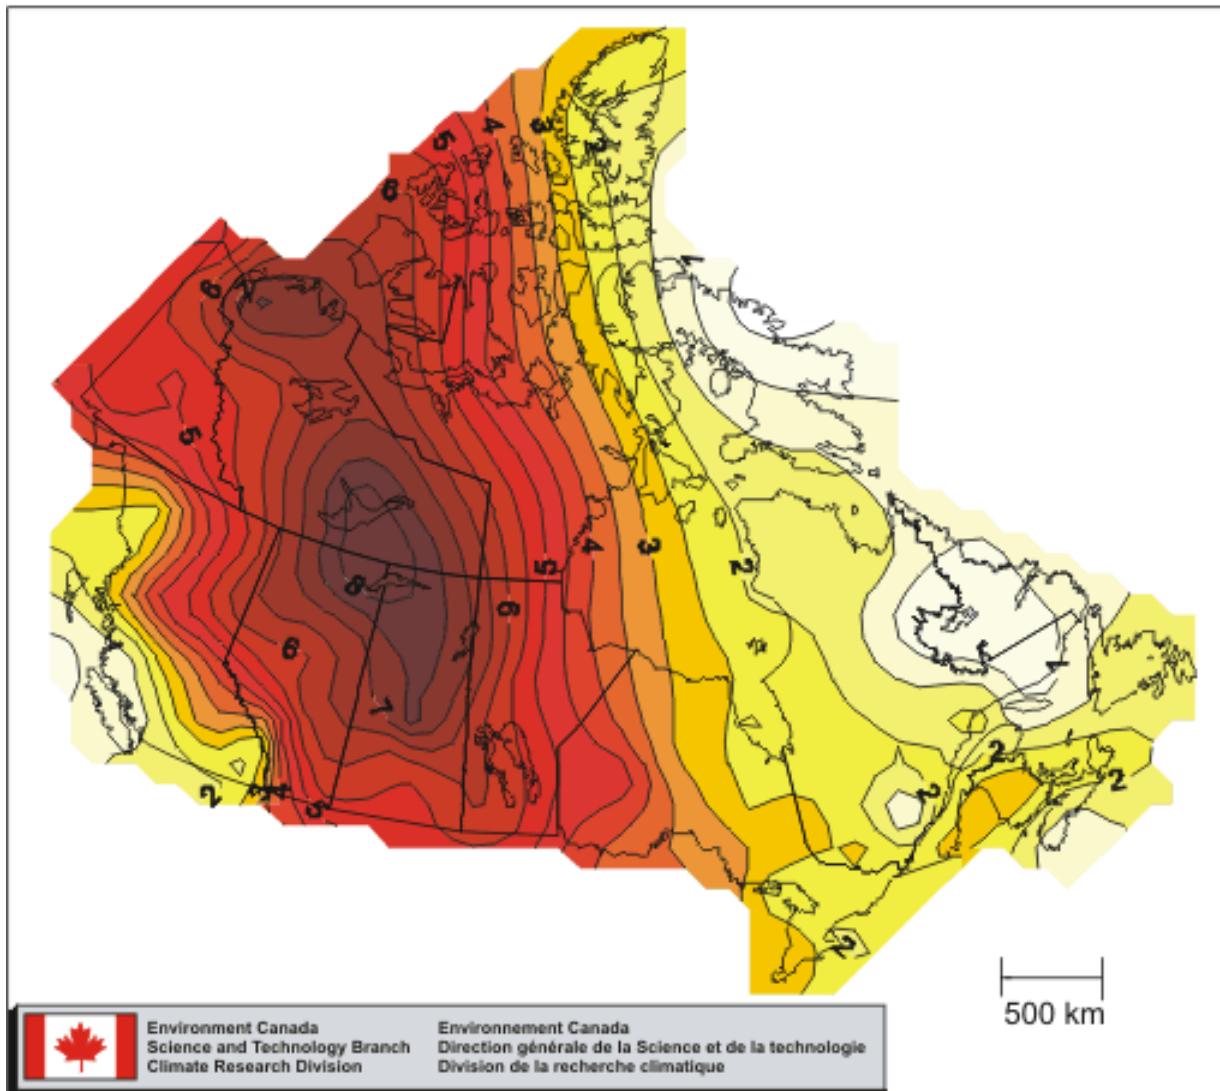

- Manage predicted settlements using common design principles
- Enhance winter heat extraction from the ground using thermosyphons
- Open-graded rock embankment materials
- Selective use of insulation within the embankment
- Reflective surface treatments

Winter Roads over Land and Ice

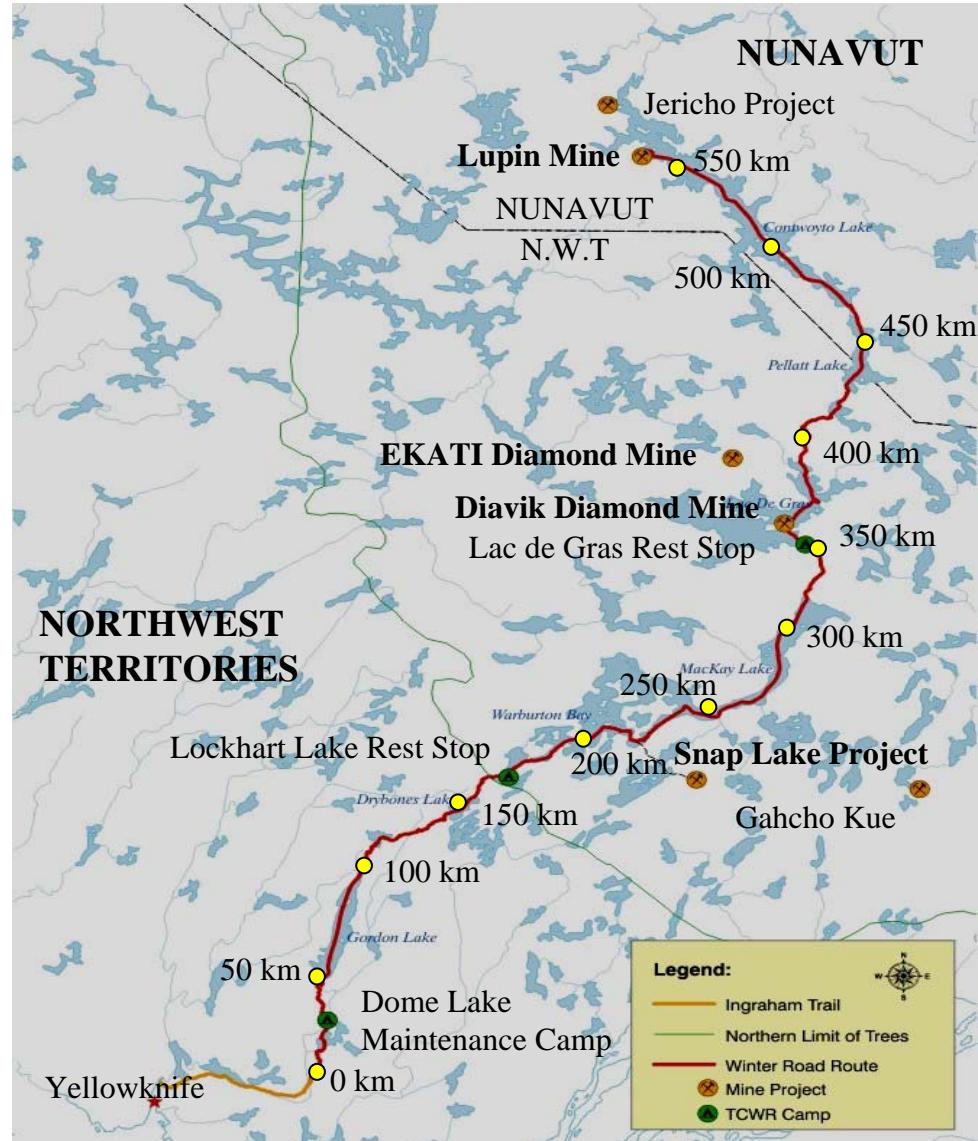

TEMPERATURE DEPARTURES FROM NORMAL
Winter (Dec, Jan, Feb) 2005/2006
ANOMALIES DE LA TEMPERATURE PAR RAPPORT A LA NORMALE
Hiver (dec, jan, fev) 2005/2006

Tibbett to Contwoyto Winter ROAD

600 km construction and resupply corridor for Canada's Diamond Mining Industry

Traffic volumes increasing and predicted decline in available safe operating period due to mean annual air temperature warming

Diamond Mines

Ekati Mine Site

Diavik Mine Site

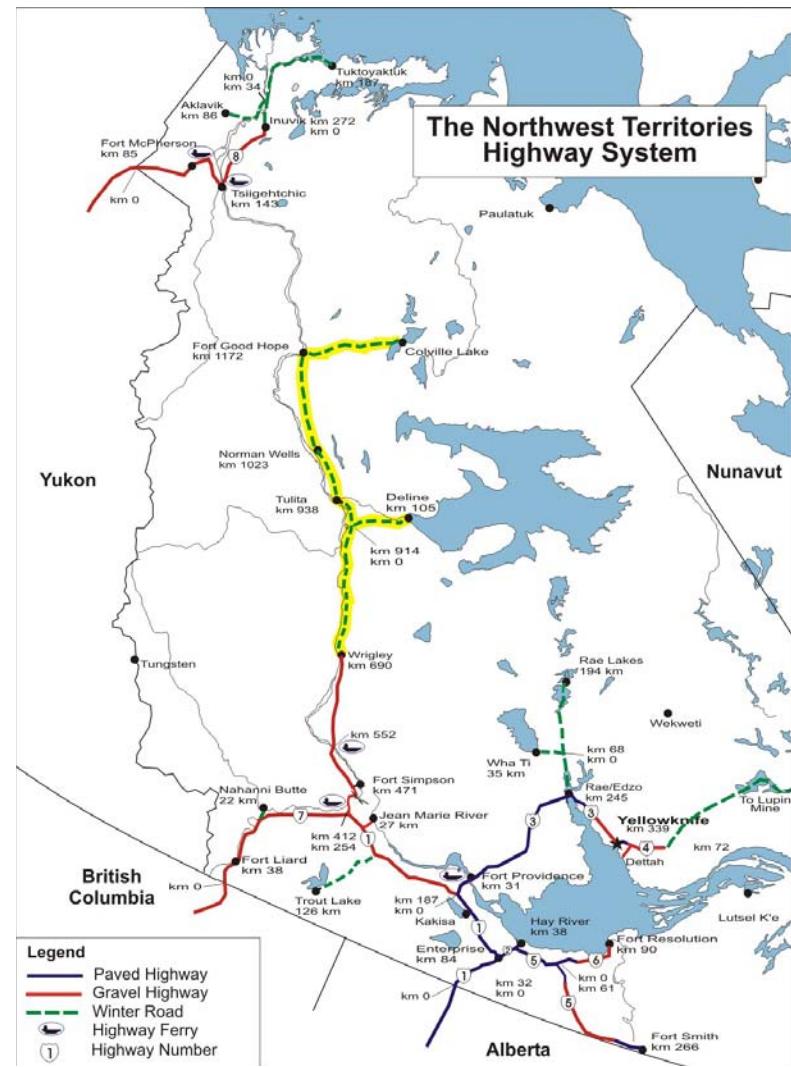

Medium and Longer Term Adaptation Strategies

Medium Term - Move southern 170 km off lake ice and construct a parallel seasonal overland road

Long Term - Shipping route south from the Arctic Coast for fuel and bulk supplies
